ABSTRACT

This article analysed primary theoretical sources with the view of operationalisation and systematisation of the notions of risk as well as the notions that are allied and interdisciplinarily connected to it. In the outcome of the theoretical study both classical and the most recent risk studies and correlating events have been analysed and systematised staying in the focus of the study against the backdrop of social instability.

Besides, different factors influencing group cohesion and organizability of behaviour in risk situation are studied.

Therefore, this article is seen as an attempt to analyze a risky situation and recognize whether the phenomenon of risk is the factor of organisational behaviour. And still there are relevant though unsolved theoretical and practical issues concerning the problem of individual psychological disposition to risk in connection with individual personal peculiarities and social conditions..

Author Keywords

Risk, preparedness for risk, social instability, group, decision making.
